BEFORE

AFTER

BURN INJURY

Case Description

Age/Sex: 5 years / Male

Medical Condition: Burn Injury (Scald: Hot Water Spill) 30% Total Body Surface Area (TBSA)

Treatment Summary

- A single Seriderm Ag dressing was applied for 13 days. A standard dressing was applied after 13 days.
- Complete scar-free healing was observed after 25 days.
- No concomitant medication was prescribed.
- No prior treatment before Seriderm Ag.

Clinical Notes

- A pediatric patient with 30% TBSA scald burn was successfully managed using Seriderm Ag without requiring grafting.
- ✓ Despite an initial estimate of 30 days for complete healing, significant improvement was observed, and the patient recovered within 25 days.
- ✓ No pain or discomfort was reported during dressing changes, indicating good tolerability of the product.
- ✓ Seriderm Ag supported antimicrobial protection, moist wound healing, and skin regeneration, contributing to faster-than-expected recovery.
- ✓ No additional medications or ointments were needed during the course of treatment.

BEFORE

AFTER

BURN INJURY

Case Description

Age/Sex: 6 months / Male

Medical Condition: Acute Superficial Burn Injury (Oil Burn) 17% Total Body Surface Area (TBSA)

Treatment Summary

- A single Seriderm Ag dressing was applied for 10 days.
- Significant healing was observed after 10 days.
- No concomitant medication was prescribed.
- No prior treatment before Seriderm Ag.

Clinical Notes

- ▶ The patient, a 6-month-old male, sustained a 17% superficial burn due to hot oil exposure.
- ✓ The burn was successfully managed using a single application of Seriderm Ag.
- ✓ No additional medications or topical agents were required during the treatment.
- ✓ The patient remained comfortable and pain-free throughout the healing process.
- ✓ The use of Seriderm Ag helped avoid the need for grafting while providing effective wound protection, moisture retention, and antimicrobial support.

Day 1 (after dressing)

Day 21

THERMAL BURN – ANTERIOR SURFACE BURNS

Case Description

Age/Sex: 4 years / Male

Medical Condition: Thermal Burn – Anterior Surface Burns (ASB) – 40% TBSA

Treatment Summary

- A single Seriderm Ag dressing was applied for 21 days.
- Healing Site: STSG donor area only.
- No concomitant medication was prescribed.
- No prior treatment before Seriderm Ag.

Clinical Notes

- A 4-year-old male child with 40% TBSA anterior surface thermal burns underwent skin grafting, and Seriderm Ag was used specifically on the donor site.
- ✓ A single dressing was applied and maintained for 21 days, with no requirement for additional topical agents or systemic medications.
- ✓ The dressing supported a moist and protected healing environment, with antimicrobial benefits that aided recovery of the donor site.
- ✓ The patient experienced no discomfort or pain during or after dressing application.

BEFORE

Day 1 (after dressing)

AFTER

Day 13

POST-SKIN GRAFT – DONOR SITE CARE

Case Description

Age/Sex: 47 years / Male

Medical Condition: Post-Skin Graft – Donor Site Care

Treatment Summary

- A single Seriderm Ag dressing was applied for 13 days instead of collagen dressing.
- No concomitant medication was prescribed.
- No prior treatment before Seriderm Ag.

Clinical Notes

- ▶ A 47-year-old male patient underwent treatment for a skin graft donor site, managed with a single Seriderm Ag dressing.
- ✓ The dressing was retained for 13 days without any requirement for topical or systemic medications.
- ✓ The patient remained comfortable and pain-free throughout the healing process.
- ✓ The use of Seriderm Ag ensured antimicrobial protection, moist wound healing, and effective donor site management.

Indications

Seriderm® Ag is a complete wound healing solution that offers accelerated wound healing and combats infections in a wide range of infected or high-risk wounds, including:

- Diabetic ulcers
- Surgical wounds
- Pressure ulcers (bed sores)
- Wound preparation for grafting
- Donor Sites
- Second-degree burns
